EXAMPLE

Demo example used for the testing of the ipxact2systemverilog tool.

Base Address
 0x0

1.1 Registers

Ad-dress	Register Name	Description
0x00	*reg0*	write something useful for reg0
0x01	*reg1*	
0x02	*reg2*	write something useful for reg2
0x03	*reg3*	write something useful for reg3
0x04	*reg4*	reg4 is a very useful register. It can take down the moon when configured correctly.
0x05	*reg5*	reg5 is as useful as reg4 but without a reset value defined.
0x06	*reg6*	reg6 is a read only register.
0x07	*reg7*	write something useful for reg7
0x08	*reg8*	register with empty and no descriptions of the fields

1.2 reg0

Name
 reg0

Address
 0x0

Reset Value
 0x00000000

Access
 read-write

Description
 write something useful for reg0

31							24
byte3							
0	0	0	0	0	0	0	0

23							16
byte2							
0	0	0	0	0	0	0	0

15							8
byte1							
0	0	0	0	0	0	0	0

7							0
byte0							
0	0	0	0	0	0	0	0
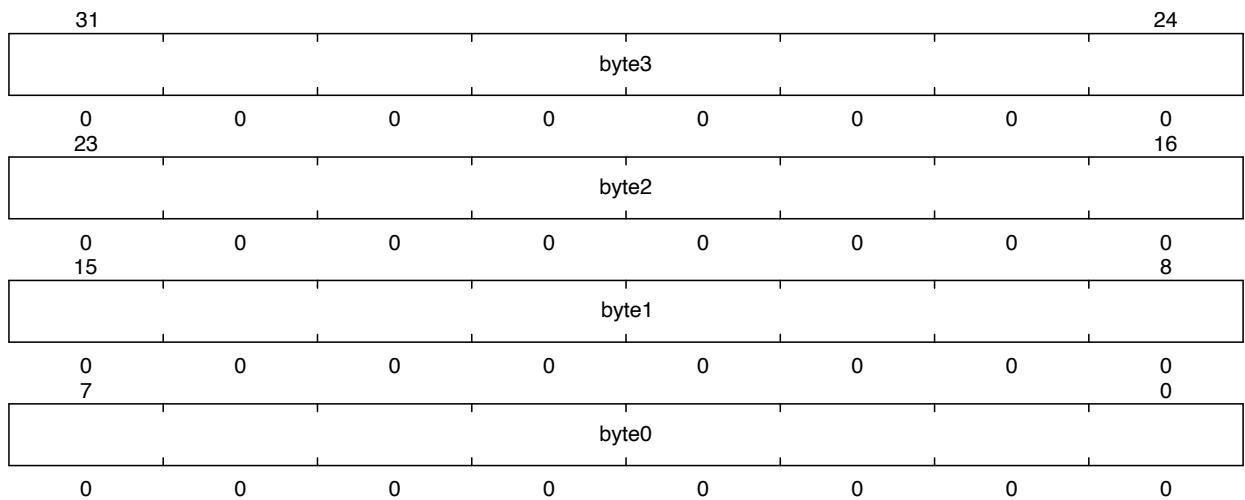

Bits	Field name	Reset	Description
[31:24]	byte3	0x00	write something useful for field3
[23:16]	byte2	0x00	write something useful for field2
[15:8]	byte1	0x00	write something useful for field1
[7:0]	byte0	0x00	write something useful for field0

1.2.1 byte0

Minimum
0x00

Maximum
0x07

1.3 reg1

Name
reg1

Address
0x1

Reset Value
0x00000001
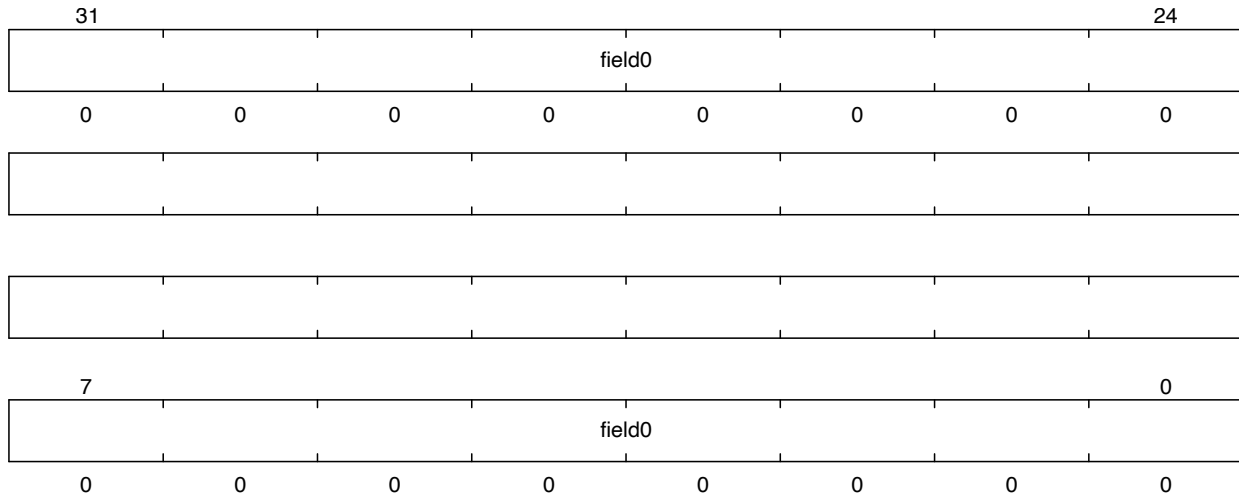

Access
read-write

Description

31							24
			field0				
0	0	0	0	0	0	0	0

7							0
			field0				
0	0	0	0	0	0	0	0

Bits	Field name	Reset	Description
[31:0]	field0	0x00000001	write something useful for field0

1.3.1 field0

Minimum
  0x00000004

Maximum
  0x00000014

1.4 reg2

Name
  reg2

Address
  0x2

Reset Value
  0x00000001

Access
  read-write

Description
  write something useful for reg2

31	30	29	28	27	26	25	24
0	0	0	0	0	0	0	0

23	22	21	20	19	18	17	16
0	0	0	0	0	0	0	0

15	14	13	12	11	10	9	8
						monkey4	
0	0	0	0	0	0	0	0

7	6	5	4	3	2	1	0
monkey3		monkey2		monkey		power2	power
0	0	0	0	0	0	0	1
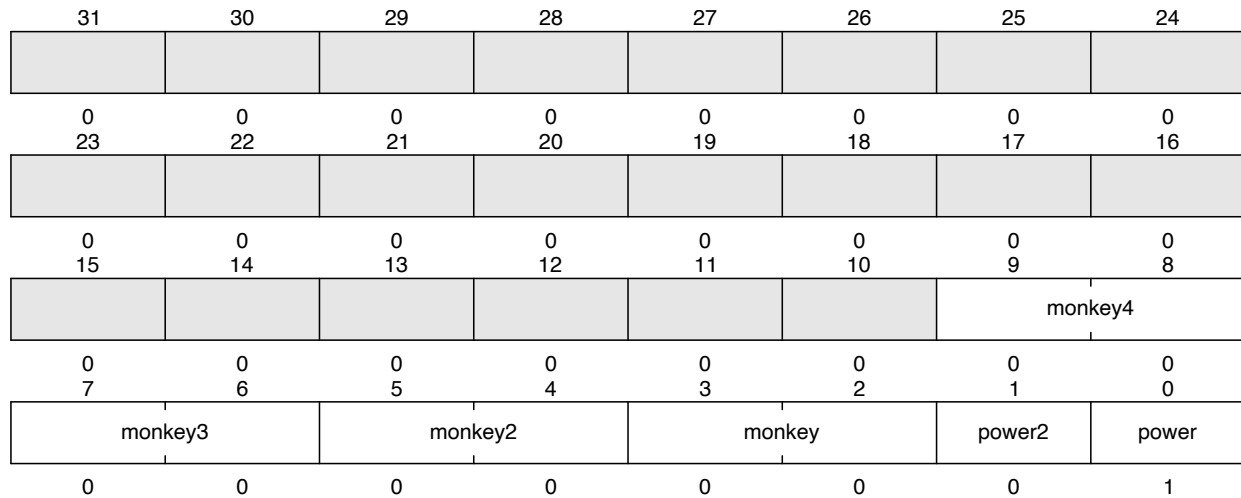

Bits	Field name	Reset	Description
[9:8]	monkey4	0x0	which monkey
[7:6]	monkey3	0x0	which monkey
[5:4]	monkey2	0x0	which monkey
[3:2]	monkey	0x0	which monkey
1	power2	0x0	write something useful for field power2
0	power	0x1	write something useful for field power

1.4.1 power

Name	Value	Description
false	0x0	disable
true	0x1	enable

1.4.2 power2

Name	Value	Description
false	0x0	
true	0x1	

1.4.3 monkey

Name	Value	Description
chimp	0x0	a monkey
gorilla	0x1	
phb	0x2	and another monkey

1.4.4 monkey2

Name	Value	Description
chimp	0x0	
gorilla	0x1	
phb	0x2	

1.4.5 monkey3

Name	Value	Description
phb	0x0	
gorilla	0x1	
chimp	0x2	

1.4.6 monkey4

Name	Value	Description
chimp	0x0	
gorilla	0x1	
bonobo	0x2	

1.5 reg3

Name
   reg3

Address
   0x3

Reset Value
   0x00000001
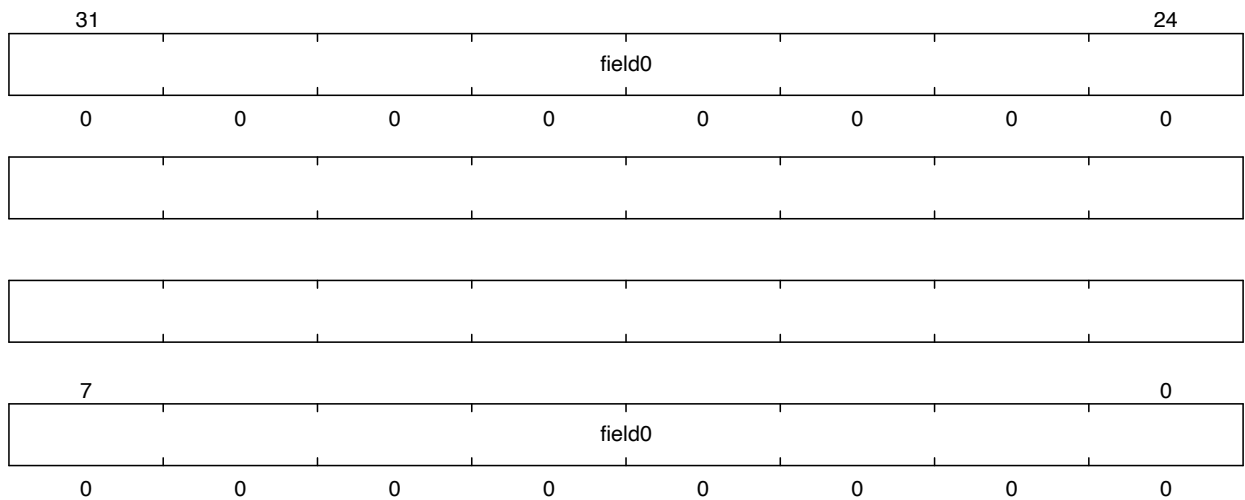

Access
   read-write

Description
   write something useful for reg3

31							24
			field0				

0	0	0	0	0	0	0	0

7							0
			field0				

0	0	0	0	0	0	0	0

| Bits	Field name	Reset	Description
[31:0]	field0	0x00000001	write something useful for field0

1.6 reg4

Name
> reg4

Address
> 0x4

Reset Value
> 0x0000000c

Access
> read-write

Description
> reg4 is a very useful register. It can take down the moon when configured correctly.

31							24
			reg4				

0	0	0	0	0	0	0	0

7							0
			reg4				

0	0	0	0	0	0	0	0

Bits	Field name	Reset	Description
[31:0]	reg4	0x0000000c	

1.7 reg5

Name
  reg5

Address
 0x5

Access
  read-write

Description
  reg5 is as useful as reg4 but without a reset value defined.

```
31                                                          24
|                          reg5                              |

7                                                            0
|                          reg5                              |
```

Bits	Field name	Description
[31:0]	reg5	

1.8 reg6

Name
  reg6

Address
  0x6

Access
  read-only

Description
  reg6 is a read only register.

31							24
			reg6				

7							0
			reg6				
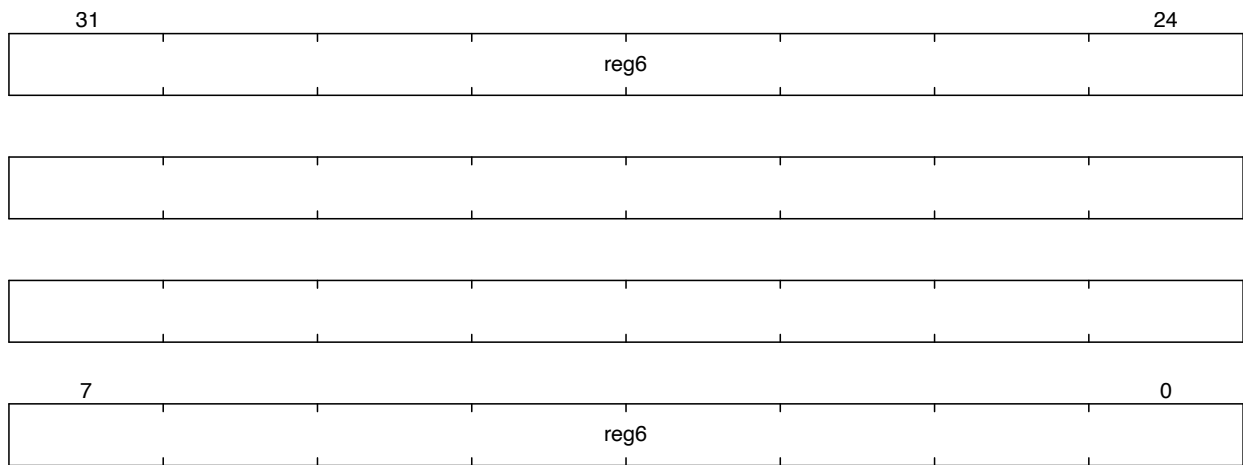

Bits	Field name	Description
[31:0]	reg6	

1.9 reg7

Name
    reg7

Address
    0x7

Reset Value
    0x00000000

Access
    read-write

Description
    write something useful for reg7

31	30	29	28	27	26	25	24
0	0	0	0	0	0	0	0

23	22	21	20	19			16
				nibble2			
0	0	0	0	0	0	0	0

15	14	13	12	11			8
				nibble1			
0	0	0	0	0	0	0	0

7	6	5	4	3			0
				nibble0			
0	0	0	0	0	0	0	0
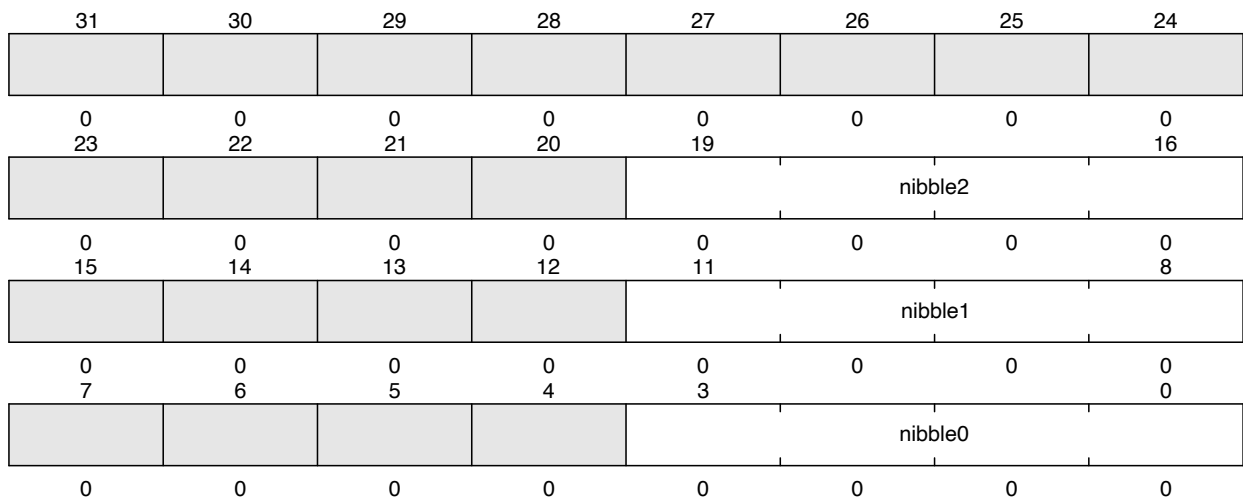

Bits	Field name	Reset	Description
[19:16]	nibble2	0x0	write something useful for nibble2
[11:8]	nibble1	0x0	
[3:0]	nibble0	0x0	write something useful for nibble0

1.10 reg8

Name
>   reg8

Address
>   0x8

Reset Value
>   0x00000000

Access
>   read-write

Description
>   register with empty and no descriptions of the fields

31	30	29	28	27	26	25	24
0	0	0	0	0	0	0	0

23	22	21	20	19	18	17	16
0	0	0	0	0	0	0	0

15	14	13	12	11			8
				nibble1			
0	0	0	0	0	0	0	0

7	6	5	4	3			0
				nibble0			
0	0	0	0	0	0	0	0
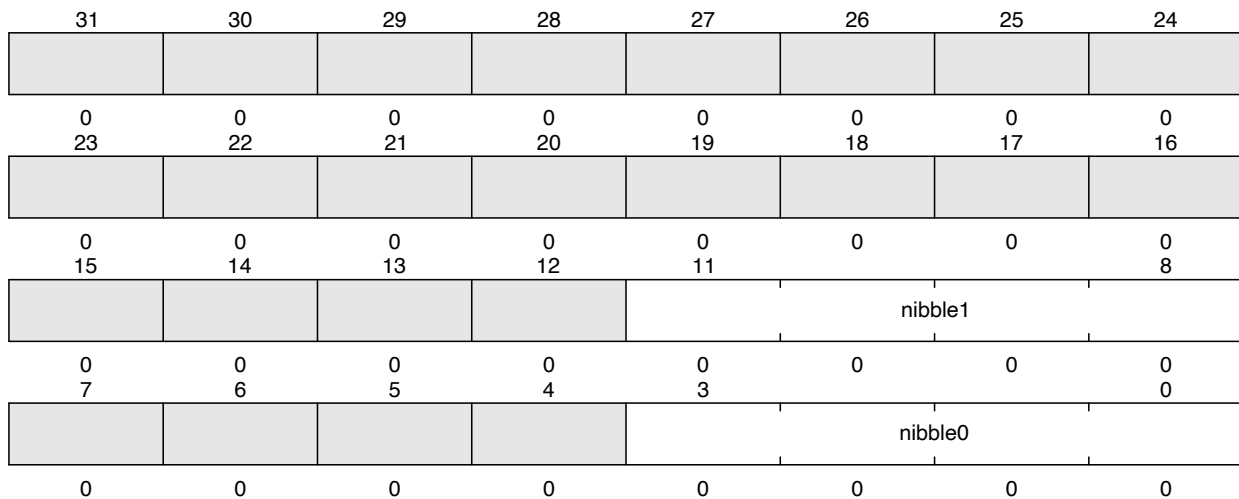

Bits	Field name	Reset	Description
[11:8]	nibble1	0x0	
[3:0]	nibble0	0x0
